

# FOX

## Rotary Limit Switch

Rotary limit switch used to control and measure the movement of industrial machines by measuring the rotation angle and/or counting the number of revolutions of a shaft.

Fox is used on wind turbines to control the position of the nacelle or the pitch angle of the blades.

### FEATURES

- It consists of a gear motor that transfers movement to the cams and the other movement detection devices through a primary input reduction stage (worm gear and helical toothed gear) and one or more secondary output stages (pairs of straight toothed gears).
- Accurate adjustment of cams by means of screws.
- Positive opening NC contacts for safety functions.
- Mechanical life of switches: up to 10 million operations.
- IP protection degree: Fox is classified IP66, IP67 and IP69K.
- NEMA protection degree: Fox is classified Type 4X\*.
- Extreme temperature resistance: -40°F to +176°F (-40°C to +80°C).
- It features transmission and gear driving shafts made of stainless steel AISI 430F or AISI 303. worm gear transmission shaft rotating on ball bearings, self-lubricating technopolymer gears and driving bushes, technopolymer base and cover.
- All materials and components used are wear resistant and guarantee protection of the unit against water and dust.

### OPTIONS

- Revolution ratios from 1:3 to 1:2870. achieved by combining different secondary output stages.
- Snap action switches with 1NO+1NC change-over contacts or slow action switches with 1NC contact.
- It can be equipped with a cam set (with up to 5 switches) and potentiometers, encoders. Yankee absolute encoders.
- Dedicated cable clamps or connectors.
- Available with anti-moisture plug fitted to the base by means of a lock nut, to improve transpiration for the limit switch whilst maintaining protection against water.
- Available with flanges, pinions and couplings.
- Plates with universal adapter to replace existing systems.

### CERTIFICATIONS

- CE marking, cULus\* marking and EAC certification.
- Fox is available, upon request, with the SIL1 certification (Safety Integrity Level 1), according to Standard IEC61508.
- Complies with accident prevention regulation BGV C 1 (only for Germany)
- HALT TEST (Highly Accelerated Life Test) passed. simulating conditions largely exceeding standard operating conditions.

Use the online configurator (<https://configuratore.terworld.com>) or fill in the request form for accurate product configuration.

## OVERALL DIMENSIONS

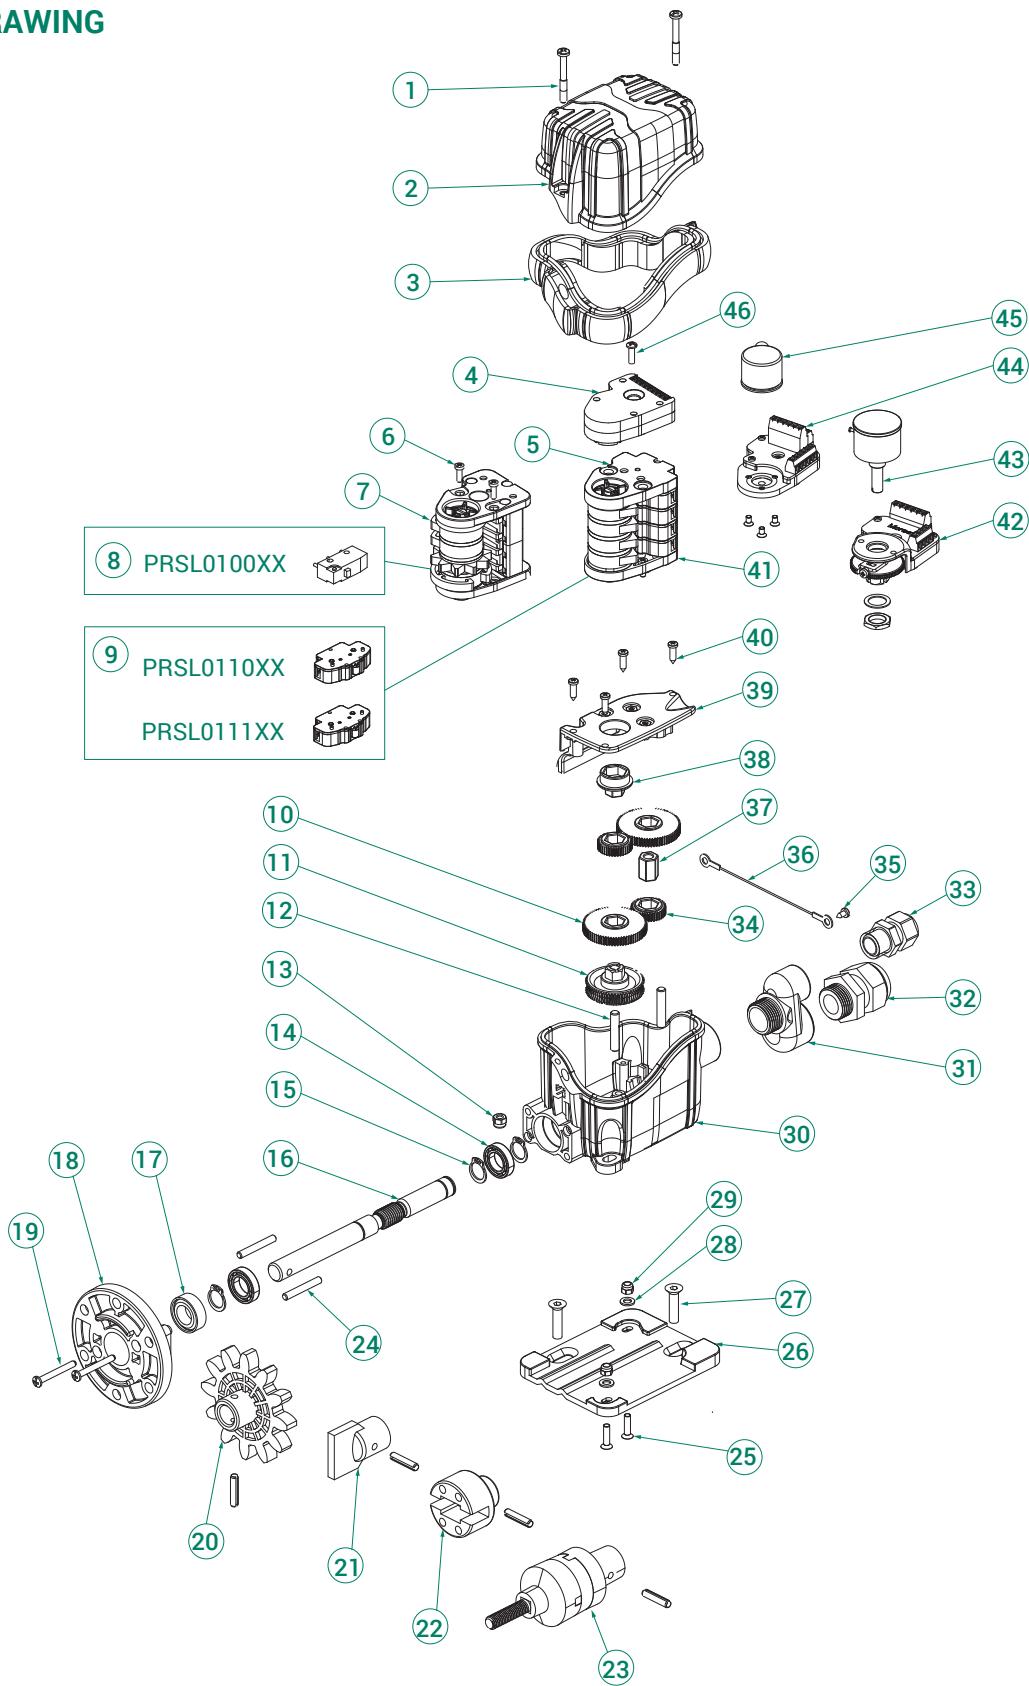

**Standard**

**With flange**

## EXPLODED DRAWING

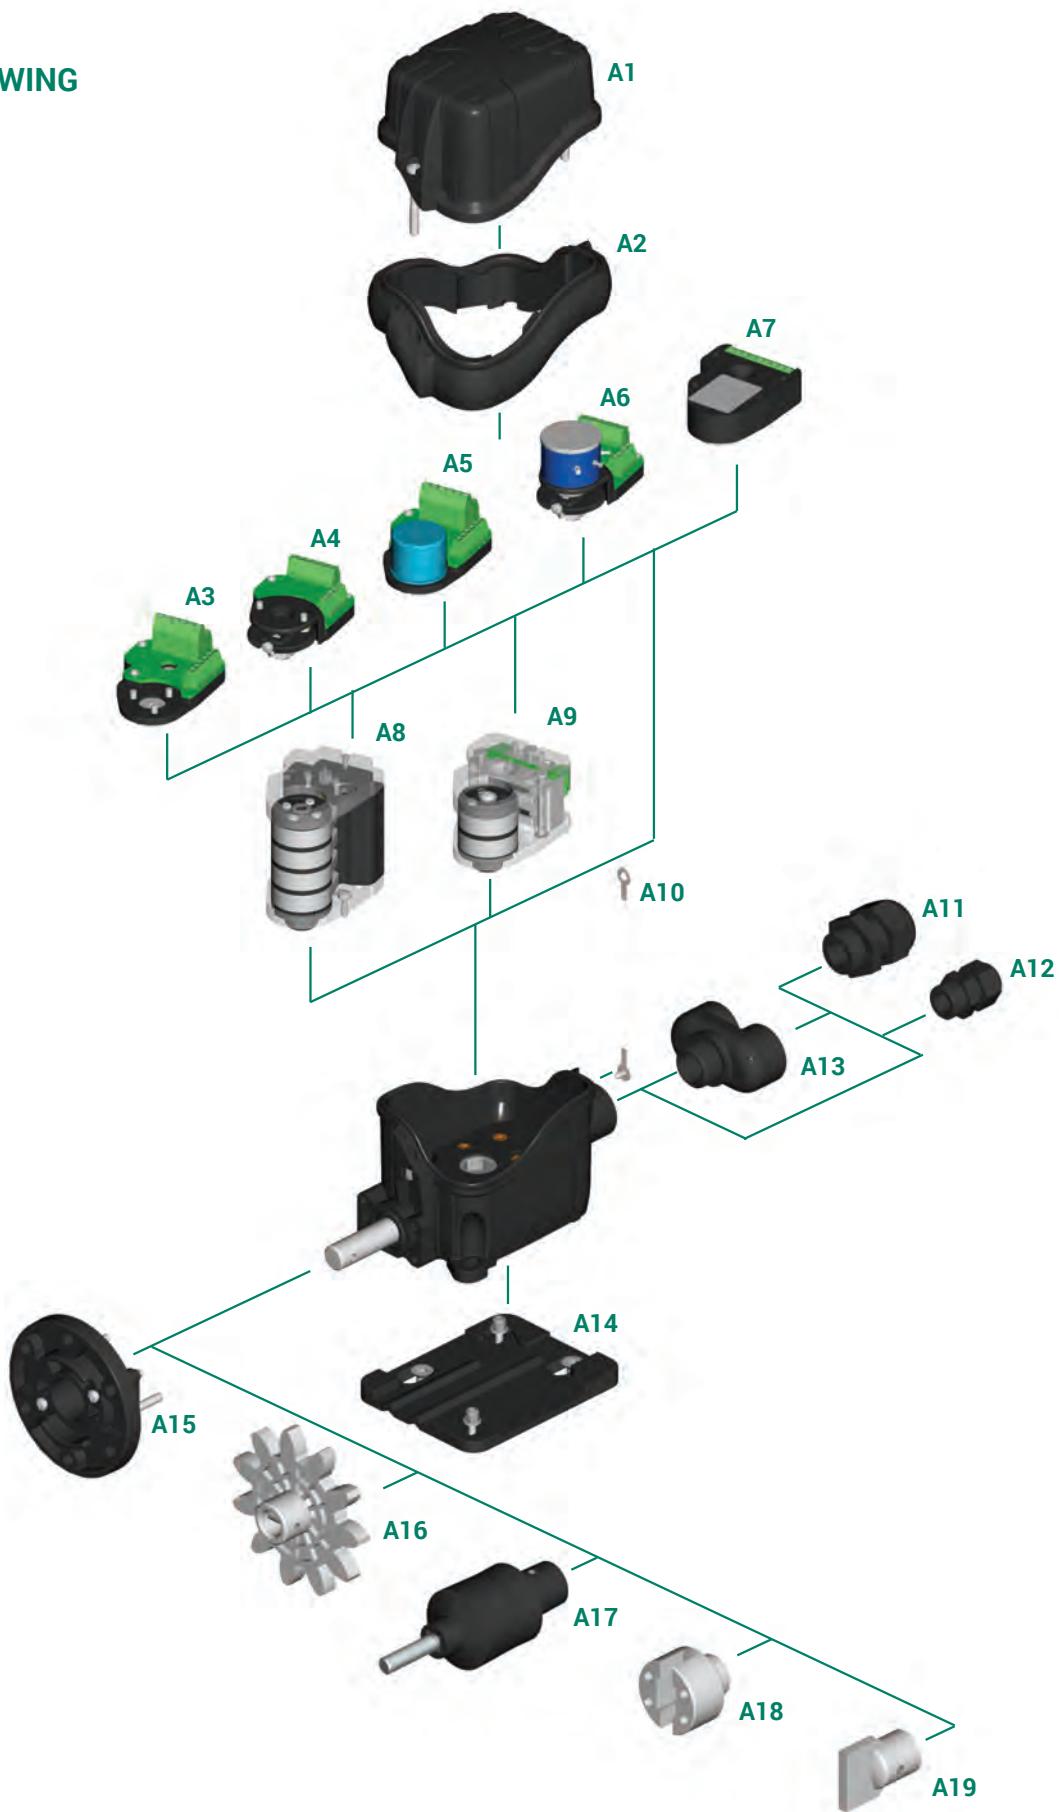

## STANDARD LIMIT SWITCHES

Standard limit switches are equipped with cams PRSL7194PI  for PRSL0110XX and PRSL0111XX switches, cams PRSL7124PI  for PRSL0100XX switches and shafts made of stainless steel AISI 430F.

Standard limit switches are not cULus certified.

## FOX - REQUEST FORM FOR NON STANDARD LIMIT SWITCH

### Instructions

(See next page for list of components and legends)

- 1 Version:** check the required version.
- 2 SIL 1 certified:** check the box if you require SIL 1 certified units.
- 3 Revolution ratio:** write the required revolution ratio.
- 4 Standard cam set:** write the code of the cam set required.
- 5 Customized cam set:** for non standard cam sets, fill in the scheme choosing the cams and the switches required. With switches PRSL0110XX and PRSL0111XX it is possible to assemble sets with 2, 3, 4 or 5 cams/switches. With switches PRSL0100XX it is possible to assemble onle sets with 2 or 4 cams/switches.  
Customized cams are available on request.
- 6 Potentiometer. encoder. Yankee:** write the code of the potentiometer, encoder or Yankee required.  
ATTENTION: it is possible to mount a potentiometer or an encoder alone or together with a set of 2 or 3 cams/switches. Potentiometers PA020001 and PA020002 can be mounted only with sets of 2 cams/switches.  
ATTENTION: Yankee may be mouted alone or together with a set of max. 4 cams/switches.
- 7 Cable clamp:** check the cable clamp required.
- 8 Coupling. flange. pinion gear:** check the box when coupling, flange or pinion gear are required.  
When a standard pinion gear is required, write the code number listed in the pinion gear charts in the catalogue.  
When a special pinion gear is required, write the number of teeth, the module and the primitive diameter.
- 9 Shaft:** check the shaft type required.  
Customized shafts are available on request.
- 10 Cover holding wire:** check the box when a cover holding wire is required.

### Version 1

- Version CE EN  
 Version cULus CE EN  
 Version with anti-moisture plug CE EN

ATTENTION: Limit switches with switches PRSL0100XX are not cULus certified.

### SIL1 certified 2

### Revolution ratio 3

| Yankee - PWM output                                   | PA01AC01 |

#### 5 Legend - Switches

## USE AND MAINTENANCE INSTRUCTIONS

Fox rotary limit switch is an electromechanical device for low voltage control circuits (EN 60947-1, EN 60947-5-1) to be used as electrical equipment on machines (EN 60204-1) in compliance with the fundamental requirements of the Low Voltage Directive 2014/35/UE and of the Machine Directive 2006/42/CE.

The limit switch is designed for use in industrial environments under even severe climatic conditions (operational temperature from  $-40^{\circ}\text{F}$  to  $+176^{\circ}\text{F}$  ( $-40^{\circ}\text{C}$  to  $+80^{\circ}\text{C}$ ), suitable for use in tropical environment). The equipment is not suitable for use in environments with potentially explosive atmosphere, corrosive agents or a high percentage of sodium chloride (saline fog). Oils, acids or solvents may damage the equipment; avoid using them for cleaning. Do not connect more than one phase to each switch. Do not oil or grease the control elements or the switches.

The limit switch is supplied with a bag of accessories including: 2 self-locking nuts (7), 2 metric screws (1), 1 no-drop wire (2), 1 self-tapping screw (3), 1 cable clamp (4). Furthermore, accessories may include, in addition to the above-mentioned parts and instead of the cable clamp (4), 1 double cable clamp holder (14), 2 cable clamps M20 (15) or 1 cable clamp M20 (15) and 1 cable clamp M16 (16).

The installation of the limit switch shall be carried out by expert and trained personnel. Wiring shall be properly done according to the current instructions.

Prior to the installation and the maintenance of the limit switch, the main power of the machinery shall be turned off.

### Steps for the proper installation of the limit switch

- Place the self-locking nuts (7) in their seats in the enclosure (6).
- Insert one end of the no-drop wire (2) into the self-tapping screw (3) and tighten the screw into its hole on the enclosure (6).
- Connect the limit switch shaft (8) and the reduction gear shaft avoiding any misalignment between the two shafts.
- Fix the limit switch tight in order to avoid vibrations of the equipment during operation; for fixing operations use only the feet (9) with metric screws M4 or M5 and their washers.
- In case a single multicore cable is employed, screw the cable clamp (4) to the enclosure (6); when two multicore cables are employed, use the cable clamp holder (14), then screw cable clamps (15, 16) to the cable clamp holder.
- Insert the cable into the limit switch through the cable clamp (4, 15, 16).
- Strip the multipole cable to a length suitable for stripping the single poles; we suggest the use of pin terminals.
- Clamp the wire into the cable clamp (4, 15, 16).
- Connect the switches according to the contact scheme printed on the switches or to the wiring scheme on the back of the instructions (tighten the wires into the terminals with a torque equal to 0.5 Nm; (UL (c)UL: use  $60^{\circ}\text{C}$  or  $75^{\circ}\text{C}$  copper (CU) conductors and stiff or flexible wire 14-22 AWG); insertability of wires into the terminals  $2 \times 0.5\text{mm}^2$   $2 \times 1.5\text{mm}^2$   $1 \times 2.5\text{mm}^2$ ).

- Adjust the operating point of the cams; for proper adjustment, loosen the central screw (12) of the cam set, adjust the operating point of each single cam by turning its adjusting screw (11) (the numbers on the screws refer to the cams counting from bottom to top of the set), then tighten the central screw (12).
- Insert the free end of the no-drop wire (2) into one of the metric screws (1), then tighten the metric screws (1) to close the limit switch; check the proper positioning of the rubber in the cover (5) and tighten the screws (1) with a torque of 80/100 cNm.

### Steps for routine maintenance

- Check the proper tightening of the screws (1) of the cover (5).
- Check the proper tightening of the switch terminal screws.
- Check the proper tightening of the central screw (12) holding the cams (11).
- Check the wiring conditions (in particular where wires clamp into the terminals).
- If there is an anti-moisture plug, check its conditions.
- Check the conditions of the rubber fit into the cover (5) and check the tightening of the cable clamp (4, 15, 16) around the cable.
- Check that the limit switch enclosure (5, 6) is not broken.
- Check the alignment between the limit switch shaft (8) and the reduction gear shaft.
- Check that the limit switch is properly fixed.

Any change to parts of the limit switch will invalidate the rating plate and identification data of the device, and render the warranty null and void. In case of replacement of any part, use original spare parts only.

TER declines all responsibility for damages caused by the improper use or installation of the equipment.

### UL Specifications with PRSL0110XX or PRSL0111XX switches

#### UL Technical Specifications

UL certified Fox Code = PFB9U67L XXXX XXX  
= PFB9U67M XXXX XXX

Switches Rating = A600, Q600

Environmental Rating = Type 1, 4 and 4X

Cord type = flexible, type minimum SW or SJW (ZJCZ/7)

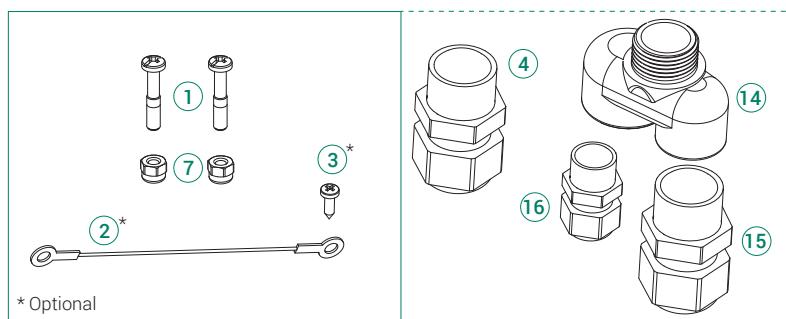

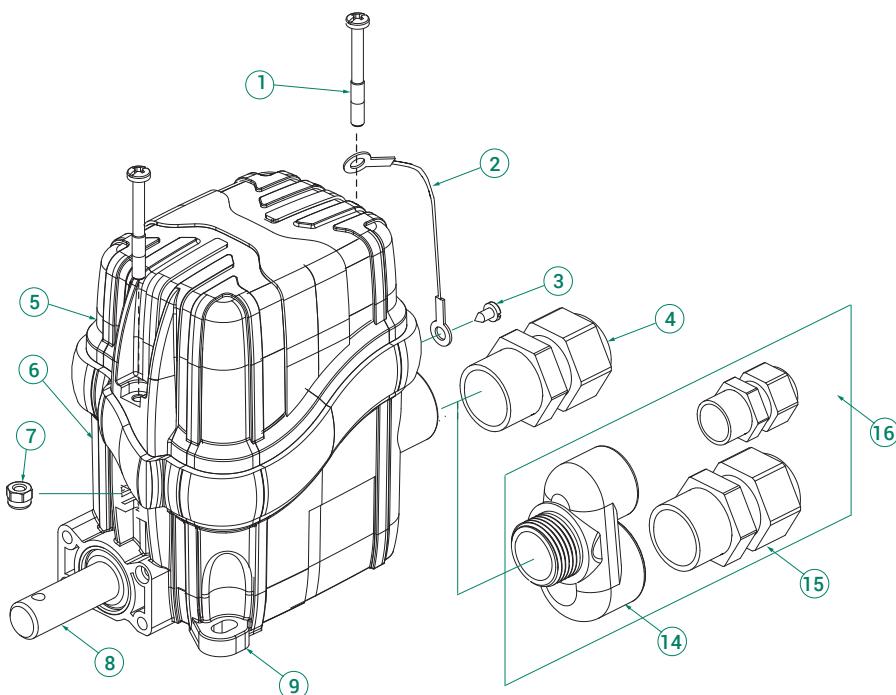

Wire size range = 14-22 AWG stranded or solid

Conductors = Copper (CU) 60/75°C

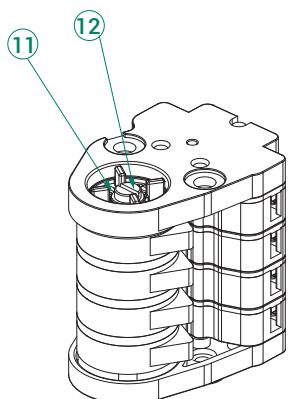

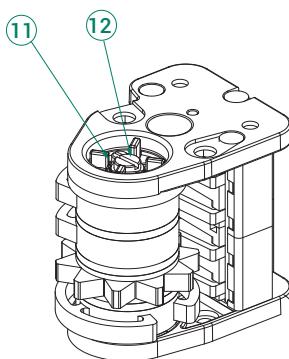

Terminal tightening torque = 0.5Nm (4.50 lb.in)

Tightening torque of the cover screw = 1Nm (8.85 lb-inc)

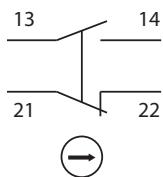

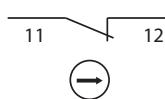

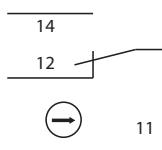

Marking =
